

Science

Magill School offers Specialist Programs for Reception to Year 6 students. A brief explanation of each Specialist Program and the staff responsible for delivering them is included below.

Science is an inspiring, engaging, and enjoyable subject which provides countless opportunities for students to explore how the world works. It is taught as a specialist subject R-6. Each weekly lesson is a double block which is 100 minutes in length.

Students will engage in science learning through an inquiry cycle which includes 'hands on' activities, experiments, investigating, individual/group work, report writing and data collection, researching and reflecting on aspects of their learning. The focus is on providing opportunities to allow students to understand the curriculum and connect this to real-world experiences. Students will be assessed throughout the term with feedback given verbally and in writing about their effort and achievement. There will be comments included in both the Term 2 and Term 4 reports alongside Achievement and Effort grades.

Students will engage in learning from the three strands of the curriculum, which include:

- Science Understanding: Physical, Biological, Chemical and Earth and Space Sciences
- Science as a Human Endeavour
- Science Inquiry Skills

Science R-2

Monday - Thursday

schona.murray461@schools.sa.edu.au

Science R-2

Wednesday, Thursday

Teena.Nicholls45@schools.sa.edu.au

Science Years 3-5

Wednesday, Thursday

rebecca.phillips434@schools.sa.edu.au

Science Years 5-6

Tuesday - Friday
